

MANUEL ALMEIDA

Senior Software Engineer

📍 Rio de Janeiro, Brazil | 📞 +55 21 98226-9642 | ✉️ manuelmbda@gmail.com | 💼 linkedin.com/in/manuelit

PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 8+ years of experience designing, building, and scaling cloud-native applications across fintech, banking, SaaS, and telecommunications. Deep expertise in distributed systems, microservices, and cloud infrastructure, with a track record of delivering highly available services and modernizing legacy platforms.

Comfortable owning technical initiatives end-to-end: architecting systems, tuning performance, mentoring engineers, resolving production incidents, and AI engineering.

CORE COMPETENCIES

Backend Development • Java & Spring Boot • Distributed Systems • Microservices Architecture • REST API Design • GraphQL • Cloud Architecture (AWS) • Docker & Kubernetes • Event-Driven Systems • System Design • Performance Optimization • CI/CD • Production Troubleshooting • Technical Leadership • Mentoring • Clean Architecture • SOLID Principles • Design Patterns • Test-Driven Development (TDD) • Agile Development • AI Engineering • LLMS

TECHNICAL SKILLS

Languages: Java, Kotlin, Go, Python, TypeScript, JavaScript

Backend: Spring Boot, Spring WebFlux, Java EE, NodeJS, FastAPI, JPA/Hibernate, REST APIs, GraphQL, Microservices

Frontend: React, HTML5, CSS3, Tailwind CSS, Vite, Jest

Cloud & DevOps: AWS, GCP, Azure, Docker, Kubernetes, Terraform, Jenkins, GitLab CI, Buildkite

Messaging: Kafka, RabbitMQ, SQS

Databases: PostgreSQL, MySQL, Oracle, DynamoDB, MongoDB, Redis

AI Engineering: LLM Applications, AI Agents, Claude Code, Model Context Protocol (MCP), Agentic AI Workflows, AI-assisted Development

Testing: JUnit, Unit Testing, Integration Testing, TDD

Engineering Practices: Clean Architecture, SOLID Principles, Design Patterns, Git, Scrum, Agile

Operating System: Linux, Windows, MacOS

PROFESSIONAL EXPERIENCE

Software Engineer | Jdoodle | May 2024 – May 2026

- Led the architectural redesign of the company's cloud-based Web IDE around Docker-based containerized services, reducing cloud infrastructure costs by 20% while improving scalability and maintainability.
- Integrated Stripe to support subscriptions, coupons, and regional pricing, enabling new pricing tiers and flexible monetization strategies.
- Built high-throughput reactive streaming APIs using Spring WebFlux for AI-powered services, achieving sub-100 ms response latency while supporting over 5,000 concurrent streaming connections.
- collaborative code editing feature using Node.js, MongoDB, and Yjs, increasing user engagement by 25% through seamless multi-user collaboration.
- Built concurrent backend services in Go using goroutines and channels, enabling efficient processing of high-volume workloads in a multi-threaded environment.
- Integrated Azure Active Directory using OAuth 2.0 and OpenID Connect, improving secure access and streamlining user authentication workflows.
- Developed a Python FastAPI service to automate cloud infrastructure provisioning for the "Vibing Code" tool.

Software Engineer | Whispir | Apr 2023 – Apr 2024

- Led the migration of a mission-critical SMS platform from a monolithic architecture to Java 17 microservices on Kubernetes, eliminating message delivery status loss during callback processing, accelerating deployment speed by 75%, and reducing monthly lost delivery status callbacks from over 1 million to zero.
- Identified and resolved memory leaks using New Relic and heap analysis, reducing GC overhead and improving p90 latency from above 100ms to 45ms.
- Designed and implemented CI/CD pipelines with Buildkite, automating build, test, and deployment processes to enable reliable daily releases.
- Directed root-cause analysis for high-priority production incidents, implementing permanent structural fixes that decreased recurring issues.
- Built React-based single-page application features for the contact list management system.
- **Software Engineer | Koin | Dec 2020 – Apr 2023**
- Designed and implemented scalable event-driven Java/Kotlin microservices to automate BNPL (By Now Pay Later) commission settlement workflow, replacing manual reconciliation with asynchronous message processing and improving processing reliability and operational accuracy.
- Mentored junior engineers through pair programming, architecture discussions, and code reviews, contributing to their technical growth and career development.
- Integrated the WhatsApp Business API to automate previously manual messaging workflows, replacing cellphone-based processes and significantly improving operational efficiency.
- Developed and enhanced React-based single-page application (SPA) features for the BNPL management platform, delivering responsive, maintainable interfaces for merchant and operations teams.
- Standardized API documentation using Swagger and ReadMe hosted portal, streamlining partner onboarding and API integration.

Software Engineer | PagBank | Jan 2020 – Nov 2020

- Developed Mastercard ISO 8583 pre-authorization capabilities for high-volume payment processing systems.
- Implemented AES encryption for the POS simulator, ensuring PCI DSS compliance and improving the security and reliability of payment testing.
- Built Splunk dashboards and proactive alerting, improving production observability and reducing mean time to detection (MTTD).
- Increased backend test coverage to 80% by implementing comprehensive unit and integration tests, reducing production defects and improving release confidence.
- Applied Clean Code principles and design patterns across backend services, improving code maintainability and accelerating onboarding for new engineers.

Software Engineer | Marlo | Sep 2018 – Dec 2019

- Developed RESTful APIs using Java and Spring Boot for an e-commerce platform.
- Improved application performance through targeted caching strategies and database query optimization, reducing API response latency.
- Integrated Slack webhook notifications into operational workflows, improving production monitoring and reducing incident response time.
- Provisioned and managed Google Cloud Platform (GCP) infrastructure using Terraform, developing reusable Infrastructure as Code (IaC) modules to enable consistent, version-controlled deployments across environments.

Software Engineer Intern | BNDES Bank | Jan 2015 – Jul 2016

- Developed backend functionality for financial processing systems using Java and mainframe technologies.
- Executed and maintained batch jobs supporting daily financial transactions.
- Resolved frontend defects using JavaScript and jQuery in support of legacy production systems.

EDUCATION

Bachelor of Computer Science (Honors) — Universidade Federal Fluminense
2012 – 2016

PROFESSIONAL DEVELOPMENT

- **Claude Code Bootcamp** Hooks, MCP & Agentic AI Workflows — Udemy (10.5 hrs, Instructor: Madan Reddy) — Completed June 2026
- **General English (24 weeks)** Ability English, Melbourne, Australia (May 2017 – Oct 2017)
Front-End Development (300 Hours) — freeCodeCamp — Completed February 2017
- **Technical Reading** Clean Architecture – Robert C. Martin, Spring in Action (6th Edition) — Craig Walls , System Design Interview — Alex Xu, Clean Code — Robert C. Martin

LANGUAGES

Portuguese — Native | **English** — Fluent
